

New advances in Pre-Concentration for GC-MS: Seeing More and Lower

Live Webinar | 29 September 2023 | 11:00am CEST

Join our webinar and find out more about new advances in pre-concentration for GC-MS.

Seeing everything, and as low as possible, with GC and MS is a function of selectivity and sensitivity: get as much as you can on column, and as best as you can, don't favor one set of compounds over another.

At some point a one microliter injection of a sample fails these criteria; what next? Concentration!

We will focus on how to concentrate analytes introduced via liquid, headspace, SPME, thermal desorption and more, all using the latest advancements in a Peltier cooled, valveless, and simple to understand dynamic focusing system for your GC.
